A tool try-on device includes a body and a frictional retaining member mounted to the body. The frictional retaining member and the body together define a compartment for receiving a rotatable member rotatably mounted to an end of a handle of a tool. The frictional retaining member exerts a frictional force to an outer surface of the rotatable member of the tool for retaining the rotatable member in place unless a rotational force greater than the frictional force is applied to the handle of the tool in a ratcheting direction.
